CSE 491 — Supervisor Meeting Form

One form per meeting. Complete the form during the meeting, have it signed by the project supervisor, and upload the signed copy to the course MS Teams channel within one week of the meeting. For any problem, contact the course assistant through MS Teams.

Project title	A Human-in-the-Loop Knowledge Graph Generation Engine for Preventing Hallucination and Schema Drift in LLMs: An Application on Hadith Isnad Chains		
Group members (name, no.)	Yahya Efe Kuruçay - Deniz Büyükşahin - Alperen Ulukaya -		
Project supervisor	Res. Asst. Dr. Taha Yiğit Alkan	**Meeting no.**	1
Date / duration	02.10.2026	**Attendees**	All group members
Work completed since the last meeting	The initial GiraffeGraph project concept and its potential application to religious knowledge were reviewed. The main problem was defined as formally representing religious questions and related knowledge, constructing a Knowledge Graph from this structured representation, and integrating it with a RAG-based question-answering system. Hadith isnad chains were identified as a potential graph-based use case.		
Issues, risks and blockers discussed	The main challenge is defining an appropriate schema for representing religious knowledge and determining how hadith sources, narrators, and isnad chains should be modeled as graph structures. Relevant datasets, existing Knowledge Graph approaches, and suitable methods for evaluating the resulting system also need to be investigated.		
Decisions and action items (with owner and due date)	The project will initially investigate three main components: schema design, Knowledge Graph construction, and RAG integration. Hadith isnad chains will be examined as a graph-based application scenario. A literature review was assigned to each team member, with at least 20 papers per topic: • Alperen Ulukaya – Graph structures and techniques • Deniz Büyükşahin – LLM applications in religious contexts • Yahya Efe Kurucay – LLM evaluation metrics Due date: Next supervisor meeting.		
Plan until the next meeting	Each member will review the assigned literature, identify relevant methods and existing studies, and prepare concise academic summaries. The team will use the findings to refine the project scope, determine suitable graph/schema approaches, and identify possible methods for modeling hadith isnad chains and integrating them with a RAG system.		
Date of the next meeting	09.10.2026		
Supervisor's assessment	Insufficient ☐ Adequate ☐ Good ☐ Very good ☐
